

Way Beyond PG-8X is a Reason ReFill in the vast Bitley™ catalogue, built for the VST instrument PG8X. Each patch automatically calls the PG8X plugin so that it's just like browsing any Reason instrument file. The refill is available to purchase and download via <https://bitleysounds.com>. Additional patches for Subtractor, Thor, Effects units etc are commonly shared / occasionally updated or changed throughout the Bitley™ series of refills.

Way Beyond PG-8X is based on Martin Luders' VST Instrument called PG8X, which in turn is based on the classic vintage Roland keyboards and modules JX-8P, JX-10 and MKS-70 (latter two also called Super JX). All Roland trademarks are presented here with utter respect for the founding hardware synthesizer makers in Japan.

Way Beyond PG-8X includes previous libraries by us, originally made on and for the JX-8P and the Super JX synthesizers. It also includes factory preset material derived from the JX-8P and the Super JX as those sounds are famous building blocks. The refill is intended to be used in several different layering modes, also including additional Reason rack instruments.
